

## Stable Isotopes of Beryllium

| Isotope | Z(p) | N(n) | Atomic Mass | Natural Abundance | Nuclear Spin |
|---------|------|------|-------------|-------------------|--------------|
| Be-9    | 4    | 5    | 9.0121822   | 100.00%           | 3/2-         |

Beryllium was discovered in 1797 by Louis-Nicolas Vauquelin. Its name derives from the Greek word *beryllos*, meaning "beryl."

The lightest alkaline-earth metallic element, beryllium is a hard, brittle, gray-white metal, with a hexagonal close-packed crystal system. It is the lightest structural metal known and can be fabricated by rolling, forging or machining. It is soluble in acids (except nitric acid) and alkalies. It is resistant to oxidation at ordinary temperatures, with high heat capacity and thermal conductivity. Its chemical reactions are similar to those of aluminum.

Beryllium is permeable to x-rays. It occurs in several minerals, mostly combined with silica and alumina, the most common minerals being beryl, chrysoberyl, phenacite and bertrandite. Beryllium oxide is a component of precious stones, such as emerald, aquamarine and topaz. It is found in trace amounts in the ore feldspar. It is used in nuclear reactors to moderate the velocity of slow neutrons.

Elemental beryllium and its compounds are very poisonous by inhalation or intravenous route. Chronic inhalation of beryllium dusts or fumes can cause *berylliosis*, a serious lung disease. Skin contact with soluble salts of the metal can cause dermatitis. Beryllium also is a carcinogen: there is sufficient evidence of its inducing cancer in animals and humans. It is one of the United States Environmental Protection Agency's listed priority pollutant metals in the environment.

## Properties of Beryllium

|                                |                      |
|--------------------------------|----------------------|
| <b>Name</b>                    | Beryllium            |
| <b>Symbol</b>                  | Be                   |
| <b>Atomic number</b>           | 4                    |
| <b>Atomic weight</b>           | 9.01218              |
| <b>Standard state</b>          | Solid at 298 °K      |
| <b>CAS Registry ID</b>         | 7440-41-7            |
| <b>Group in periodic table</b> | 2                    |
| <b>Group name</b>              | Alkaline earth metal |

## Properties of Beryllium (continued)

|                                 |   |
|---------------------------------|---|
| <b>Period in periodic table</b> | 2   |
| <b>Block in periodic table</b>  | s-block   |
| <b>Color</b>                    | Gray-white or lead gray                                   |
| <b>Classification</b>           | Metallic  |
| <b>Melting point</b>            | 1287 °C   |
| <b>Boiling point</b>            | 2970 °C   |
| <b>Thermal conductivity</b>     | 190.00 W/(m·K)  |
| <b>Electrical resistivity</b>   | $3.36 \times 10^{-10} \mu\Omega \cdot \text{cm}$ at 20 °C |
| <b>Electronegativity</b>        | 1.5   |
| <b>Specific heat</b>            | 1820 J/(kg·K)   |
| <b>Heat of vaporization</b>     | 297.00 kJ·mol <sup>-1</sup>                               |
| <b>Heat of fusion</b>           | 7.95 kJ·mol <sup>-1</sup>                                 |
| <b>Density of solid</b>         | 1.85 g/cm <sup>3</sup>                                    |
| <b>Electron configuration</b>   | [He]2s <sup>2</sup>                                       |
| <b>Oxidation state</b>          | 2+  |
